Safety inspection of fisheries products on the radioactive materials

The Gunma Prefectural Government has implemented safety inspection on fisheries products produced in Gunma Prefecture. The results of the inspections on the land-locked salmon samples taken from rivers on 8 and 9 June show that the radioactivity is not detectable in the fish sample inspected.

1. River inspected  
Kanna River (Ueno Village)
2. Fisheries products inspected  
Land-locked salmon (*Oncorhynchus masou*) taken from rivers
3. Sampling date  
8 and 9 June, 2011
4. Date of inspection result  
13 June, 2011
5. Summary of the inspection results  
Radioactivity was not detectable for the fish sample inspected.
6. Results of sampling inspection  
Facility that conducted the analysis:  
Japan Inspection Association of Food and Food Industry Environment

Sampling river	Item	Level of radioactive materials (Becquerel/kg) [Detection limit: 50 Becquerel/kg]	
		Radioactive cesium	Radioactive iodine
Kanna River	Land-locked salmon ( <i>Oncorhynchus masou</i> )	Not detectable	Not detectable

\* Provisional regulation value for fish

Radioactive cesium: 500 Becquerel/kg

Radioactive iodine: 2000 Becquerel/kg
