

(Provisional translation of the part on fishery products)

10 August, 2011

Result of the inspection on radioactive materials in agricultural, animal and fishery products produced in Shizuoka Prefecture

Sanitation Division, Environmental Health Bureau, Department of Health and Welfare, Shizuoka Prefectural Government

1. Summary

The Shizuoka Prefectural Government has been conducting the inspection on radioactive materials based on the “Shizuoka Prefecture Plan for Inspection on Radioactive Materials in Agricultural, Animal and Fishery Products” established in accordance with the policy of the Nuclear Emergency Response Headquarters. Following is the result of the inspection conducted in the second week of August. The result shows that the radioactivity is below the provisional regulation value set by the Food Sanitation Act, and confirms the safety of these products.

2. Result of the inspection (4 items, 6 samples)

No.	Item	Sampling area	Sampling date	Inspection result (Bq/kg)	
				Radioactive iodine	Radioactive cesium
(Item 1-3 are non-fishery products and omitted)					
4	Ayu sweetfish (<i>Plecoglossus altivelis</i>)	Izu City (Kano River)	7 August	Not detectable	15
5	Ayu sweetfish (<i>Plecoglossus altivelis</i>)	Hamamatsu City (Atago River)	30 July	Not detectable	5
6	Rainbow trout (farmed) (<i>Oncorhynchus mykiss</i>)	Fujinomiya City	8 August	Not detectable	Not detectable

- Facility that conducted the analysis: SEIKAN Co. Ltd. (registered laboratory in accordance with the Food Sanitation Act)
- Detector used for the analysis: germanium semiconductor detector
- “Not detectable” means radioactivity is below the detection limit.
- Provisional regulation value for fish: radioactive iodine 2,000Bq/kg, radioactive cesium 500 Bq/kg
