

(Provisional translation of the part on fisheries products)

5. Result of inspection of fish

Sampling date: 13 September, 2011

Date of inspection result: 22 September, 2011

Facility that conducted the analysis: Tama Laboratory, Japan Food Research Laboratories

Item	City, town or village	Radioactivity level (Bq/kg)			
		Radioactive iodine	Radioactive cesium 134	Radioactive cesium 147	Total of radioactive cesium
Willow gudgeon (<i>Gnathopogon caerulescens</i>)	Kumagaya City	Not detectable	Not detectable	Not detectable	-
	Hasuda City	Not detectable	Not detectable	Not detectable	-
	Yoshikawa City	Not detectable	Not detectable	Not detectable	-
Provisional Regulation Value*		N/A	-		500

* The Provisional Regulation Values shown in the table are that “for fish” for radioactive iodine and that “for meat, egg, fish and others” for radioactive cesium.

(Note) Not detectable means that the radioactivity level is below the detection limit of the detector.

Detection limit is 20 Bq/kg for each of radioactive iodine and radioactive cesium.
