

(Provisional translation of the part on fishery products)

Results of the inspection on radioactivity level in fisheries products  
produced in Tokyo (8<sup>th</sup> report)

2. Inspection results for fishery products

| Item | Fishing port   | Sampling date                     | Analysis facility | Inspection result            |                   |                              |                   |
|------|--|-----------------------------------|-------------------|------------------------------|-------------------|------------------------------|-------------------|
|      |  |                                   |                   | Radioactive iodine           |                   | Radioactive cesium           |                   |
|      |  |                                   |                   | Provisional Regulation Value | Measurement value | Provisional Regulation Value | Measurement value |
| 1    | Chicken grunt<br>( <i>Parapristipoma trilineatum</i> ) | Habu Port, Oshima Town            | 2-Oct             | 2,000                        | Not detectable    | 500                          | Not detectable    |
| 2    | Alfonsino<br>( <i>Beryx splendens</i> )                | Habu Port, Oshima Town            | 2-Oct             |                              | Not detectable    |                              | Not detectable    |
| 3    | Alfonsino<br>( <i>Beryx splendens</i> )                | Kozushima Port, Kozushima Village | 26-Sep            |                              | Not detectable    |                              | Not detectable    |

Note: "Not detectable" means that radioactivity is lower than detection limit in analysis.
