Results of the inspection on radioactive materials in fisheries products (press releases in March, 2011～)

Since April 1, 2012, the standard limit of radioactive cesium in fishery product has been 100 Bq/kg.

Muscle part is used as a sample unless otherwise noted.

The total value of cesium is written to two significant figures in accordance with the notice issued by the Ministry of Health, Labour and Welfare.

The numbers in the parenthesis indicate the detection limit of analysis.

Marine species of which distribution are restricted by Nuclear Emergency Response Headquaters are entirely lifted on 25 Feburuary, 2020.

27 January 2026
